wavell family dental

## and dentist Anthony Bowdler welcomes Alex Richmond to our practice.

Alex is a university trained oral health therapist who plays an important role in providing dental care to our patients. Alex helps in preventive dental care by providing individual oral hygiene care and instruction to our patients.

The oral health therapist cleans teeth for both adults and children, as well as providing fluoride treatments, and fissure sealants. Alex has been with us for nearly 12 months now and continues to help provide a wider range of treatments to our kids teeth, such as fillings and extractions.

Alex is the professional to see about **teeth whitening!** This procedure can be commenced

in office to give instantly whiter teeth, and continued at-home to improve or maintain those whiter teeth. At wavell family dental, our services continue to include:

- General dentistry and white fillings
- Crowns and dental implants
- Cosmetic dentistry
- Invisalign and teeth straightening
- Wisdom teeth management under local and general anaesthesia.

Our crowns are made in house after the addition of a CAD/CAM computer scanning and milling unit, called E4D. This allows us to make porcelain crowns in just a few days. Fantastic technology!
